Introduction

Shield Insurance is a growing insurance provider based in India, offering a diverse portfolio of products across life, health, and general insurance. The company serves both individual and corporate clients through direct sales channels and digital platforms.

Business Focus:

- Enhancing customer experience through data-driven decision-making
- Expanding policy offerings tailored to different age groups and needs
- Streamlining claims and settlement processes
- Leveraging technology for predictive analytics and sales performance

Objective

This Power BI dashboard is developed to help Shield Insurance make data driven decisions through the following reports created in Power BI:

■ Overview

Monitoring Key Performance Indicators like Revenue and Customers and understanding their behaviour across Time Period.

■ Sales Mode Analysis

Calculating Revenue and Customer Split by Sales Mode and understanding how many customers prefer what sales mode.

■ Age Group Analysis

Figuring out which Age Group generates the most amount of revenue and prefer what policies for their insurance.

Dataset

Provided in .csv format.

■ dim_customer

This table contains all the information about the customers.

■ dim_date

This table contains the dates at daily, monthly levels and week numbers of the year.

■ dim_policies

This table contains all policies data.

■ fact_premiums

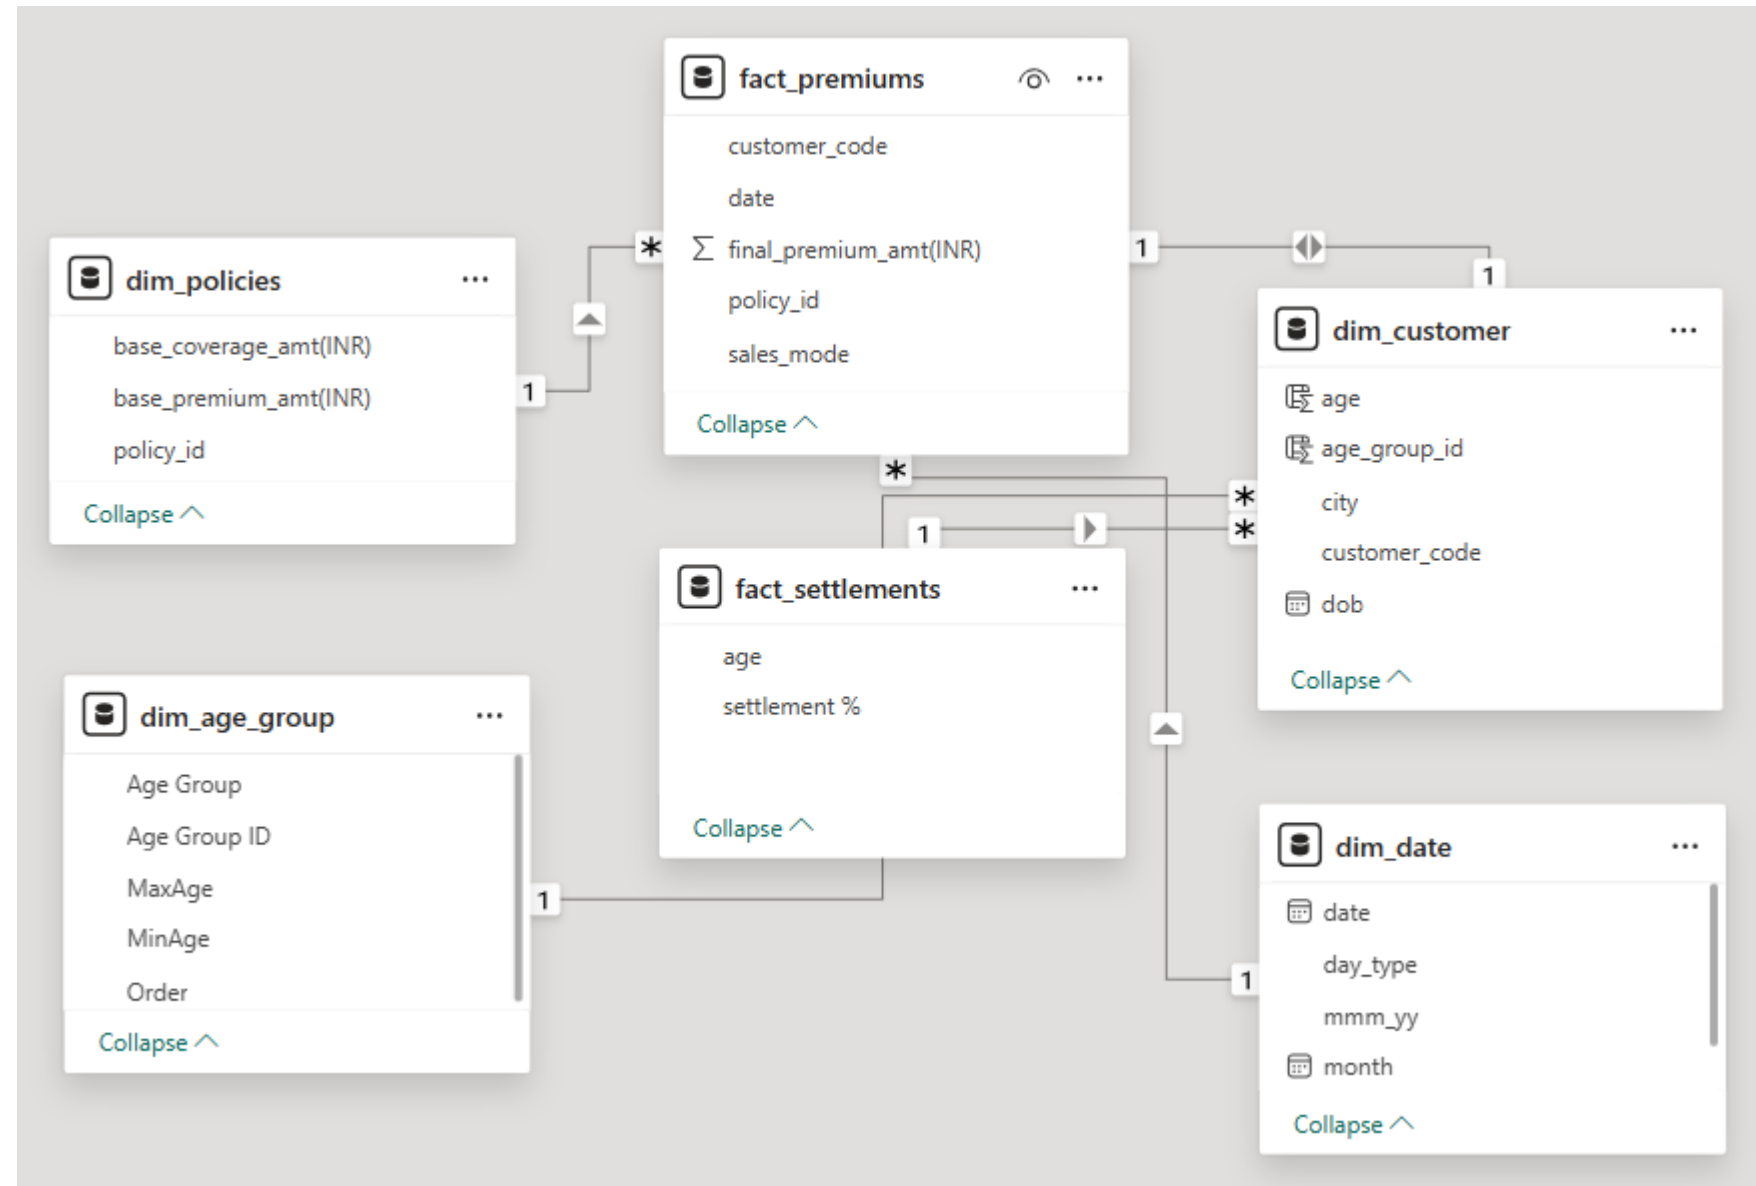

This table contains all information about policy orders.

■ fact_settlements

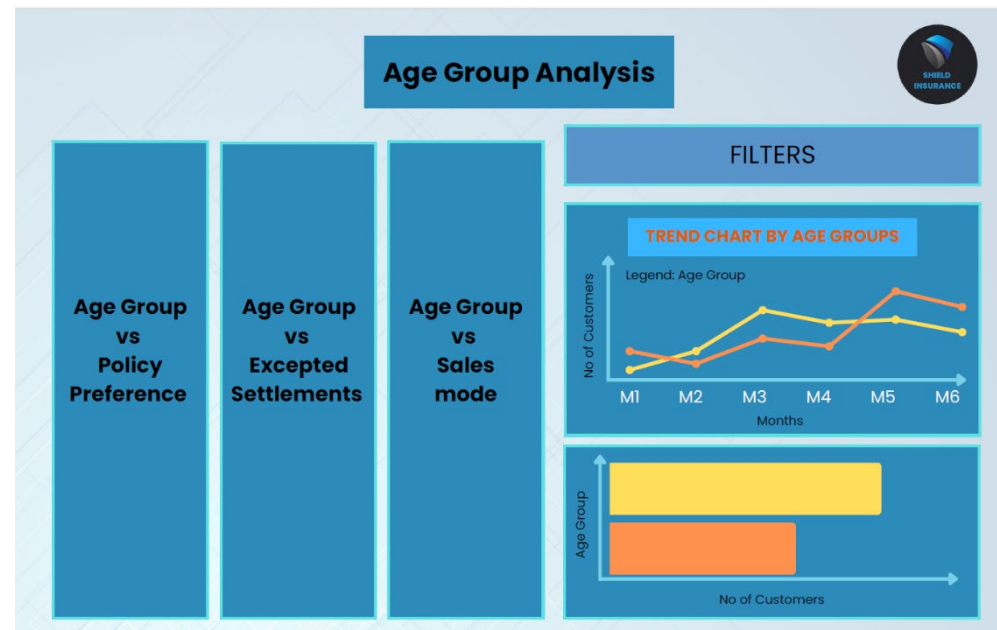

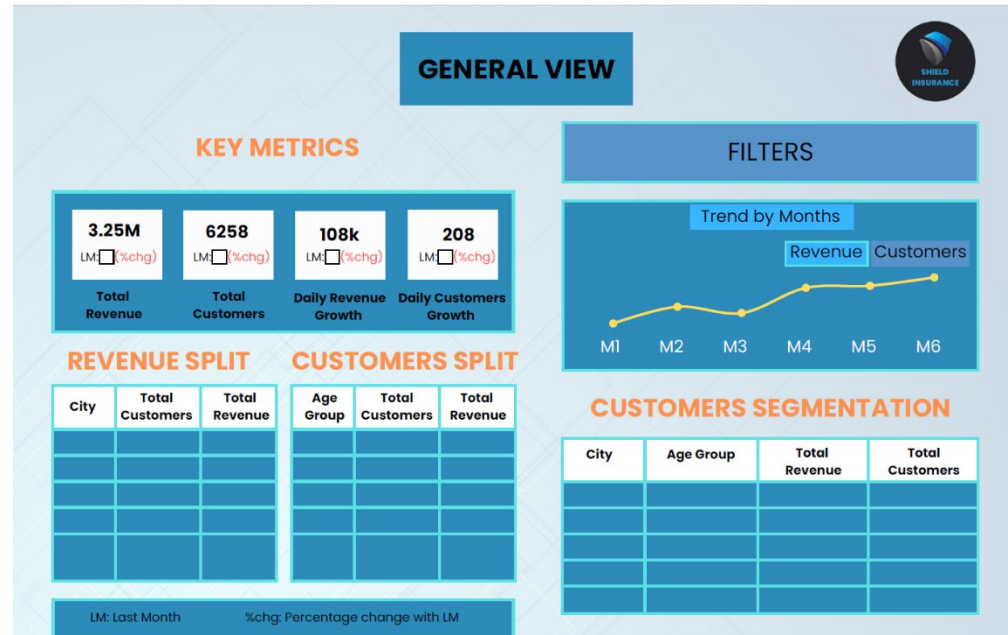

This table contains information about policy settlement

Sales Mode ● Offline-Agent ● Offline-Direct ● Online-App ● Online-Website

Insights

Offline Agent is still the **most preferred** medium by Customers for their insurance related work.

Hence, **Revenue** generated by this medium is the **highest**.

There aren't many people who are technologically aware.

Hence, they prefer an agent to do their insurance for them.

Online Apps are the **second most preferred** medium by Customers for their insurance related work.

Insights

Online Website is the **least preferred** medium by Customers for their insurance related work.

Possible Reasons:

- Especially in countries like India, **smartphone usage** far **outpaces desktop** use.
- Many people either don't own laptops or don't regularly access websites on them.
- The app becomes their primary or only interface for digital transactions.
- Apps offer **1-click access**, biometric login, and real-time notifications.
- Unlike **websites**, apps don't require a browser or **repeated logins**, making it **much faster** for users to check policies, pay premiums, or file claims.

Insights

Offline Agent although a most preferred medium by customers started declining sharply in April 2023.

Offline Direct by time has started becoming the least preferred medium by customers starting from being the second most preferred medium due to:

- The rise of Online Apps and Online Websites.
- Time investment needed to visit insurance companies and understanding complex policies on your own.
- Commission charged by the insurance agents.
- Transparency
- Slow Process

Insights

Chennai generated the **highest** amount of **revenue** and **customers** through **Offline Agent** sales mode due to slow reach of Online Apps and Websites.

Total Revenue by Age Group

Show Customer Trend

Total Revenue Trend

Age Group ● 18-24 ● 25-30 ● 31-40 ● 41-50 ● 51-65 ● 65+

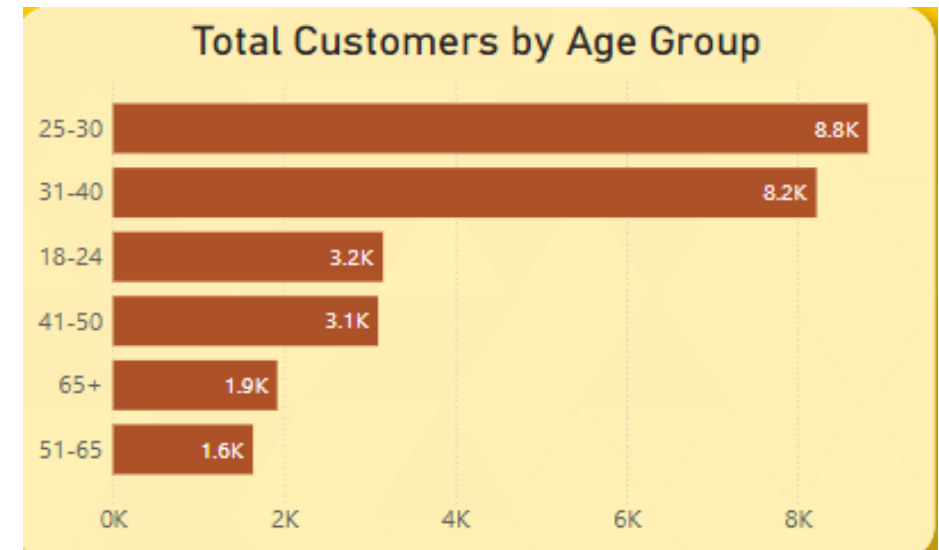

Insights

Highest Revenue generating Age Group- **31-40**. People in 31-40 are well settled people looking towards a protected life for themselves and their kids.

The **Highest** number of **Customers** came from the people in group **25-30** who have just started earning or are looking to start their business or invest in new something.

Insights

The **65+** segment shows low customer volume but **third highest revenue**, reflecting **larger premiums** and comprehensive plans common in older age groups with greater risk and financial planning needs.

The **51-65** group shows **lowest customer** volume and **second-lowest revenue** as it may **already have insurance coverage** from earlier stages in life, resulting in lower policy purchases now.

Insights

Reasons behind Third Highest number of customers in Age Group 18-24 while generating Lowest Revenue:

1. Low-Cost Entry-Level Policies

- Young customers in this age group typically opt for **basic** or **minimal coverage** plans (e.g., term life, motor insurance, health coverage with low premiums).
- These policies generate **less revenue per customer** despite higher sign-ups.

2. Group or Family Add-Ons

- Some might be **added as dependents** under family plans but still count as individual customers — without significantly boosting revenue.

Insights

Reasons behind Customer Decline in Age Group 31-40 while generating Highest Revenue:

1. Policy Renewals vs. New Customers

- Age group **31–40** may include many **existing long-term customers** who **renewed** policies, contributing to revenue but not new customer count.
- Meanwhile, **25–30** might have seen an influx of new buyers, boosting the count but possibly with **lower-premium policies**.

2. Economic or Life Stage Impact

- Customers in the 31–40 group might have **paused** or **deferred purchases** due to financial planning for other needs (e.g., home, kids).
- 25–30 group individuals may have just reached **income stability** or **awareness** prompting their **first policy purchase**.

51-65	114
65+	96
Total	4434

Insights

Sales Mode Preference

As of April 2023- Current Time

Insights

Expected Settlement is the **Highest** for **Age Group 31-40** generating **32.06%** policies settled.

Lowest for **51-65** segment generating only **7.38%**.

Insights

Reasons Age Group 25-30 dominating in all sales modes

1. First-Time Buyers Needing Guidance

- They **prefer offline agents** for **personalized explanation**, trust-building, and handholding through unfamiliar processes.

2. Exploration Stage = Multiple Touchpoints

- They're often in the **research** and **exploration phase**, interacting with **multiple channels** before buying — agent, online, call center, etc.

3. Higher Trust in Human Interaction

- Younger adults might **lack financial literacy** or confidence in making solo decisions, so they **rely more on agents**.

4. Life Events Triggering Action

- Age 25–30 is when people are **starting families**, getting married, or **buying homes**.
- These life events often prompt insurance needs, and many **prefer talking to an agent** to ensure proper coverage.

Recommendations

1. Focus on Delhi NCR & Mumbai – Your Top Revenue Cities

- **Delhi NCR** (401.57M) and **Mumbai** (239.51M) together contribute over **64%** of total revenue.
- **Recommendation:** Increase **targeted marketing**, build **dedicated agent teams**, and run **city-specific promotions** in these areas to **retain and expand** the customer base.

2. Low Revenue Potential in Indore – Consider Cost Optimization

- **Indore** contributes only **8%** of total revenue with the **lowest customer count (2096)**.
- **Recommendation:** Evaluate **agent performance**, **acquisition costs**, and consider **consolidating operations** or focusing only on high-intent leads here.

3. Age Group 31–40: Your **Golden Segment**

- Generates the **highest revenue** consistently.
- **Recommendation:** Tailor **loyalty programs**, offer **top-up plans**, and create **custom packages** to deepen engagement.

Recommendations

4. Age Group 25–30: High Engagement, Lower Revenue

- Engages across **all sales modes** actively, especially **Offline Agent**.
- **Recommendation:** Provide **cross-sell opportunities**, **educational content**, and **early-investor plans** to boost revenue per customer

5. 65+ Segment: Low Volume, High Revenue

- High-value customers needing retirement & medical coverage.
- **Recommendation:** Offer **simplified renewal**, **senior care products**, and **offline support**, possibly with family-involvement incentives.

6. Sales Mode Optimization

- Decline in **Offline Direct** and **Offline Agent** modes could be due to:
 - Cost of in-person channels
 - Shift toward **online preferences**
- **Recommendation:** Invest in **digital transformation**, train agents for **hybrid engagement**, and incentivize app usage.

Recommendations

7. Performance Dip in April 2023

- Possibly due to seasonal/campaign effects or economic triggers.
- **Recommendation:** Investigate further — check campaign history, external events, or policy changes during that period.

8. Expected Settlement Trends

- Highest in Age Groups 31–40 and 25–30 due to peak risk coverage phase.
- **Recommendation:** Use this to **upsell** more comprehensive or premium settlement products to similar profiles.

Thank You
